

TIMEPILOT®

Simple, compact and portable, TimePilot Tap+ goes where other timeclocks are afraid to go.

The durable, battery-powered Tap+ is small enough and light enough to slip into a pocket or fit in a toolbox.

But like its big brothers from TimePilot, it frees you from the time-consuming and error-prone task of calculating employee hours from timecards each week.

TimePilot Tap+ also prevents employee altering of timecards and stops “buddy-punching”!

Looking for the ultimate portable timeclock?

Introducing the battery-powered TimePilot Tap+!

Place it on a desk, mount it in your truck, even put it in your pocket!

- ▶ Employees clock in or out with just a *tap* of their iButton. A light flashes and a tone sounds to let them know the process is complete.
- ▶ Only 3 inches long, 4 inches wide and 1.5 inches high; weighs less than 5 ounces.
- ▶ Rechargeable battery lasts as long as a year between charges!
 - ▶ Each clock holds 12,000 clock-ins and clock-outs and can handle as many as 2,000 employees.
 - ▶ Just plug the included USB cable into TimePilot Tap+ and into your PC; the clock-in data downloads automatically. And while it's attached to your PC, the battery is recharging!
 - ▶ Works with top payroll software and services, including QuickBooks, ADP and Paychex.

What's an iButton?

Users touch a key-sized device called an “iButton” to the clock to clock in and out. A computer chip with a unique ID number inside each iButton identifies the user. iButtons are unaffected by water and most common chemicals, are wear-tested for 10-year durability and can be reassigned quickly and securely.

What's in the box?

- TimePilot Tap Timeclock
- 10 iButtons
- USB Cable
- Windows-Based Software
- Quick Start Guide

How does the Tap+ system work?

In the field...

The battery-powered clock can be kept in a truck, a briefcase or a pocket. Employees clock in and out with a tap of their iButton.

To collect data from your Tap+, simply plug the included USB cable into the device and into the PC running the TimePilot Central software. The data will download automatically and the clock's battery will recharge.

Let the TimePilot software handle all the calculations and prepare the data quickly and accurately. You can also modify, add or delete employee clock-ins and clock-outs. When you're ready, print out reports or export your data to payroll services or software like ADP or QuickBooks.

In the office...

You can use the clock cable-free (as above), or you can keep it tethered to the PC with the included USB cable. When it's tethered, employees' clock-ins and outs will appear in the TimePilot Central software instantly.

State-of-the-art, user-friendly software
