

TimePilot Vetro frees you from the time-consuming and error-prone task of calculating employee hours from timecards each week. The computer is a perfect counting machine—why not let it do the job, quickly and accurately?

TimePilot Vetro also prevents employee altering of timecards and reduces “buddy-punching”!

Built in USA

When it's not being used, Vetro displays a clock on its sleek black face.

Looking for an electronic timeclock system?

Save time *and* money with TimePilot Vetro!

- Identifies employees by their iButton or by a 4-digit code entered on the sleek blue backlit keypad.
- No cabling needed! Mount the clock anywhere; collect your data with the included USB drive. Or plug it into your network for real-time data!
- Handles up to 500 employees—just add more iButtons.
- Works with top payroll software and services, including QuickBooks, ADP and Paychex.
- Designed and assembled in the USA.

What's an iButton?

Users touch a key-sized device called an “iButton” to the clock to clock in and out. A computer chip with a unique ID number inside each iButton identifies the user. iButtons are unaffected by water and most common chemicals, are wear-tested for 10-year durability and can be reassigned quickly and securely.

What's in the box?

- Timeclock
- USB drive
- Quick Start Guide
- 10 iButtons
- Software

How does the Vetro system work?

It just takes a touch! Users clock in at the Vetro timeclock, either by tapping their iButton or entering an ID number.

Collect the data for payroll and upload it to your PC running the TimePilot Central software.

Let the TimePilot software handle all the calculations and prepare the data quickly and accurately.

With or without a network!

With a network

In this mode, the PC and clock are cabled to your network server. Data is transferred in real time through the cable.

Without a network

In this mode, there's no wired connection between the PC and the Vetro clock. You'll load the data onto the USB drive at one device and plug it into a USB port on the other.

State-of-the-art, user-friendly software
